

boom!

User Guide

March 2026

How to use boom! -- your internal business management tool for accounts, contacts, tasks, ideas, impacts, projects, and meeting summaries.

1. Getting Started

1. Navigate to ohgeesolutions.com in your browser
2. Click "Sign in with Microsoft" and authenticate with your organizational account
3. You will land on the Dashboard showing an overview of your data

Tip

boom! uses your Azure AD credentials -- no separate account needed. Your session persists until you close the browser tab.

2. Navigation

The sidebar (left) organizes pages into sections. Click the chevron at the top to collapse/expand it. The current page is highlighted in blue.

Section	Pages	Icons
(Top)	dashboard	Home
activity	tasks, ideas, impacts	CheckboxChecked, Lightbulb, Flash
core	accounts, contacts, projects, summaries	Building, Person, Briefcase, People
(Bottom)	about this site	Info

At the bottom of the sidebar you'll find your avatar, name, and a Sign out button.

3. Dashboard

The dashboard is your home base. Everything is visible at a glance, and most actions can be performed without leaving the page.

Quick Create Bar

The top bar has pill-style buttons for creating any record type: action item, idea, impact, account, contact, project, or summary. Click a button, fill the inline form, and save -- you stay on the dashboard. Save buttons show a spinner while saving.

Parking Lot

A full-width strip below the quick create bar with a lime green left border and car icon. Bookmark items from

dashboard lists to park them here for quick access. Max 5 items. Click action items/ideas to open inline view dialogs; other types navigate to their list page. Click X to remove.

Ideas Strip

A purple-accented horizontal strip showing all ideas as 160px tiles. Each tile shows name and category. Click to open the view/edit dialog inline.

Personal Strip

A cyan-accented strip showing all non-complete personal action items as tiles. Shows name, date, and "Top Priority" label. Click to open inline.

Work Card

Full-width tile grid showing all non-complete work action items. 4 tiles per row. Top priority items appear first. Each tile shows name, date, account, and badges for "Top Priority" or "Overdue". Click to open inline.

Right Sidebar (Pinned Notes)

The right sidebar (260px, collapsible) shows pinned notes. Toggle with the button in the quick create bar. Notes pinned from any entity appear here with a preview and attachment indicator. Click to expand.

4. Working with Records

Creating a Record

From any entity page:

1. Navigate to the page (e.g., tasks)
2. Click the "New" button in the top-right
3. Fill in the form fields and click Save

Or use the Quick Create bar on the Dashboard to create any record type inline.

Viewing a Record

Click the name of any record (shown as a blue link) to open its view dialog. View dialogs show all details plus related records where applicable.

Editing a Record

1. Open the view dialog by clicking the record name
2. Click Edit -- fields switch inline from read-only to editable
3. Modify fields and click Save (button disables with spinner)

4. Click Cancel to discard changes and return to view mode

Deactivating a Record

Click the trash icon in grid actions or on dashboard tiles and confirm. Records are deactivated (hidden from lists) rather than permanently deleted.

5. Entity Pages

Accounts

Track customer accounts with optional parent account relationships. View dialog shows a 3-column layout: contacts + action items + ideas | impacts + summaries | notes timeline.

Contacts

Manage contacts linked to accounts. View dialog shows contact details plus related ideas.

Tasks (Action Items)

Task management with status, priority, and type (work/personal). View dialog shows details plus notes timeline.

- Status: Recognized/Pondering -> In Progress -> Pending Communication -> On Hold -> Wrapping Up -> Complete
- Priority: Low | Eh | Top priority | High

Ideas

Idea pipeline with technology categorization (Copilot Studio, Canvas Apps, Model-Driven Apps, Power Automate, Power Pages, Azure, AI General, App General, Other). View dialog shows details plus notes timeline.

Projects

Project tracking linked to accounts. View dialog shows details plus notes timeline.

Impacts

Track business impacts with date and account. Simple view dialog without notes.

Meeting Summaries

Meeting documentation with 5000-char summary support. Wider dialog for text.

6. Notes & Attachments

Notes are available on accounts, action items, ideas, and projects.

1. Open a record's view dialog to see its Notes Timeline (right column)
2. Type a note and click Add Note
3. Click Attach to add a file (stored as base64 in Dataverse)
4. Click the pin icon to pin a note to the dashboard
5. Click the download icon on an attached file to download it
6. Click the delete icon to permanently remove a note

7. Theme & Copilot

Theme Toggle

Use the sun/moon toggle in the top bar to switch between light and dark mode. Your preference is saved and persists across sessions. On first visit, the app respects your system preference.

Copilot Assistant

Click the rocket icon button (bottom-right corner) to open the AI chat panel. The assistant connects via SSO -- no additional sign-in needed. Close and reopen to continue the same conversation. The chat adapts to your current theme.

8. Tips & Shortcuts

- **Navigation** Use the sidebar for quick navigation. Collapsed mode shows icons with tooltips.
- **Quick create** All entity pages support ?new=true in the URL to auto-open the create dialog.
- **Deep links** Tasks and Ideas support ?view=<id> to link directly to a record's view dialog.
- **Parking lot** Bookmark items from dashboard lists for quick access (max 5).
- **Pin notes** Pin important notes to the dashboard sidebar so they're always visible.
